

# AVOCLEAN ALCOHOL-BASED HAND SANITISER GEL

**Avocado Engineering Pty. Ltd.** is pleased to advise that in response to Covid-19 (Coronavirus) Pandemic, we produced **AvoClean Alcohol-Based Hand Sanitiser GEL** for Australian customers. AvoClean Sanitiser Gel is based on 70% Isopropyl Alcohol (IPA) content and is produced in Economic Refill Packs of 5 Litres so the users can refill their own small bottles with a minimum cost. The concentration of over **70% alcohol** with around **30% water** is an optimum concentration recommended by **WHO** against **bacteria, viruses and fungi**.

**AvoClean Hand Sanitiser Gel** contains **moisturiser** to help reduce the dryness of skin. There are two types of alcohol-based sanitiser products in the market: Liquid and Gel. Note that liquid products could be used in applications such as in spraying floors and contaminated surfaces. However, due to the liquid form of the products, wastage increases as a result of its runniness. It is also hard to use a liquid product in vehicles or in handbags as the spillage of the product may occur. **AvoClean Hand Sanitiser Gel** has been created to minimise wastage of the product during application.

**AvoClean Hand Sanitiser Gel** can be used for example in personal, domestic and industrial applications for disinfection and sanitisation.

A right concentration of alcohol and water is required to have a high efficiency of disinfection against bacteria, viruses and fungi in a short contact time. 70% alcohol with around 30% water has optimum disinfection properties.

For orders in Australia, please contact us via our website at [www.avocadoengineering.com](http://www.avocadoengineering.com).

Dr. Moezzi,

Chief Engineer.
